

NRI Electronics, Inc., ISO 9001:2015 Certification

NRI Electronics, Inc., has successfully completed a certification audit by Perry Johnson Registrars, Inc., to the newly revised ISO 9001:2015 international quality management systems standard. NRI completed its certification audit for both its Anoka Minnesota and Rochester Minnesota facility on September 14, 2016.

The new version follows a higher-level structure, making it easier to use in conjunction with other management system standards. In the new version, there is increased importance given to risk analysis and mitigation. ISO 9001:2015 is the latest revision of the world's most widely applied international standard on quality management systems. ISO 9001 helps organizations demonstrate to customers that they can offer products and services of consistently good quality. The standard also acts as a tool to streamline an organization's processes and make them more efficient at what they do.

Although companies have three years to comply with the new revision, because of NRI's mature, company-wide business and quality management system, we were able to accelerate the process to meet the requirements of the certification in less than a year after release of the new revision said Annette Leger, Corporate Quality Assurance Manager. "Our ISO9001:2015 certificate means that we continue to strive to achieve the highest quality products and services, which in turn, allows NRI to grow and maintain customer loyalty."

To maintain certification, NRI will undergo a surveillance audit each year, and a re-certification audit every three years.
